This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1822 Excerpt: ...and had little adipose substance. She is stated never to have enjoyed good health. Amphibious animals have the largest auricles, which may assist them in remaining long under water. There are two auricles in those warm-blooded animals that have two ventricles and four great vessels, and that propel the whole blood of the right ventricle through the lungs before it arrives at the left ventricle, as in mammalia and birds. One auricle is found where there is one ventricle, and where only a small portion of the blood runs through the lungs, as in cold-blooded animals, or in those whose blood is a trifle warmer than the circumambient water. One auricle is also only found in oviparous quadrupeds. The mollusca differ materially in the parts of the heart; all of them have a left or systemic ventricle; many have a dilatation of the venae cavae compared to an auricle, and two lateral hearts or ventricles: the heart is sometimes lobed, and sometimes semicircular. The seiches have two hearts separated, and the pulmonary is divided into two. The lingules have the systemic heart divided into two. The pectinibranches have two auricles. The acephalous mollusca have either two lateral hearts or ventricles, or one ventricle with one or two auricles; or only a simple systemic ventricle, as the acephalous tuncata. The larger Crustacea have two ventricles. Fishes have only one auricle, and one ventricle, the latter of which is placed at the commencement of the pulmonary artery. Reptiles have either two auricles and one ventricle, or one auricle and one ventricle. In the fetus, the heart is larger in proportion than in the adult. It is larger in quadrupeds and birds of a small, than in those of large size. In birds, the heart is found larger than in quadrupeds; and the same rela...
