**Optimal Control Problems for Partial Differential Equations on Reticulated Domains: Approximation and Asymptotic Analysis (Systems & Control: Foundations & Applications)** Peter I. Kogut, Günter R. Leugering

In the development of optimal control, the complexity of the systems to which it is applied has increased significantly, becoming an issue in scientific computing. In order to carry out model-reduction on these systems, the authors of this work have developed a method based on asymptotic analysis. Moving from abstract explanations to examples and applications with a focus on structural network problems, they aim at combining techniques of homogenization and approximation.

*Optimal Control Problems for Partial Differential Equations on Reticulated Domains* is an excellent reference tool for graduate students, researchers, and practitioners in mathematics and areas of engineering involving reticulated domains.
