Geometric Modeling: The mathematics of shapes

Nikolay Golovanov

Geometric Modeling: The mathematics of shapes Nikolay Golovanov
"Geometric modeling continues to grow in importance... Understanding the constructs that underlie geometric modeling will place students and developers at the forefront of these new advancements. Nikolay Golovanov has paved the way to that understanding with this comprehensive presentation." - Ken Versprille, Ph.D. "Golovanov has created a text that will enable any serious student of geometric design to grasp the full power and beauty of the mathematics behind this essential set of tools, and put them to work. I am deeply impressed by the logical and methodical presentation, and by the clarity of the teaching. Highly recommended!" - Joel N. Orr, Ph.D. This book is intended for those who study, use, or develop geometric modeling systems. It is devoted to the mathematical apparatus of these systems and provides methods for constructing numerical models of the geometry of real and imaginary objects. The book outlines the methods of geometric modeling, including methods for constructing curves, surfaces, and solids. It describes the algorithms and data structures of geometric objects. It also presents principles of interconnection between elements of a model. The book examines some applications of geometric models. This book is based on the author's experience gained during the development of the C3D geometric kernel. Learn more about C3D at http://c3dlabs.com/

From reader reviews:

Freddie Patton:

Information is provisions for those to get better life, information these days can get by anyone with everywhere. The information can be a expertise or any news even a huge concern. What people must be consider if those information which is in the former life are hard to be find than now's taking seriously which one is acceptable to believe or which one the actual resource are convinced. If you obtain the unstable resource then you have it as your main information you will see huge disadvantage for you. All those possibilities will not happen with you if you take Geometric Modeling: The mathematics of shapes as the daily resource information.

Thomas Carroll:

This book untitled Geometric Modeling: The mathematics of shapes to be one of several books that best seller in this year, that's because when you read this reserve you can get a lot of benefit on it. You will easily to buy this book in the book store or you can order it by using online. The publisher with this book sells the e-book too. It makes you more easily to read this book, since you can read this book in your Touch screen phone. So there is no reason for you to past this reserve from your list.

Donald Jefferies:

You could spend your free time you just read this book this e-book. This Geometric Modeling: The mathematics of shapes is simple to develop you can read it in the playground, in the beach, train as well as soon. If you did not get much space to bring the actual printed book, you can buy the e-book. It is make you much easier to read it. You can save typically the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

Bradley Bishop:

Many people said that they feel bored when they reading a book. They are directly felt the item when they get a half parts of the book. You can choose typically the book Geometric Modeling: The mathematics of shapes to make your personal reading is interesting. Your skill of reading talent is developing when you similar to reading. Try to choose easy book to make you enjoy to study it and mingle the opinion about book and reading through especially. It is to be first opinion for you to like to open a book and study it. Beside that the guide Geometric Modeling: The mathematics of shapes can to be your new friend when you're feel alone and confuse with what must you're doing of that time.
