**Identification Modeling and Characteristics of Miniature Rotorcraft** Bernard Mettler

**Identification Modeling and Characteristics of Miniature Rotorcraft** introduces an approach to developing a simple and effective linear parameterized model of vehicle dynamics using the CIPHER identification tool created by the Army/NASA Rotorcraft Division. It also presents the first application of the advanced control system optimization tool CONDUIT to systematically and efficiently tune control laws for a model-scale UAV helicopter against multiple and competing dynamic response criteria.

**Identification Modeling and Characteristics of Miniature Rotorcraft** presents the detailed account of how the theory was developed, the experimentation performed, and how the results were used.

This book will serve as a basic and illustrative guide for all students that are interested in developing autonomous flying helicopters.
