**Semiconductor Device Modelling with SPICE** Paolo Antognetti, Giuseppe Massobrio

SPICE (Software Program with Integrated Circuit Emphasis) is a powerful design aid that electronics engineers learn and is the world standard for circuit simulation. And when circuit designers are using the various versions of SPICE to simulate circuits prior to fabrication and accurately predict future performance, this guide could be a useful reference. This revised version explains the ins and outs of SPICE, plus gives new data on modelling advanced devices such as MESFETs, ISFETs, and thyristors. The book should help readers gain maximum value from SPICE, also covering both MOS and FET models. Step by step, it takes the reader through the modelling process, providing complete information on a variety of semiconductor devices for designing specific circuit applications. These include: Pn junction and Schottky diodes; bipolar junction transistor (BJT); junction field effect transistor (JFET); metal oxide semiconductor field effect transistor (MESFET); ion sensitive field effect transistor (ISFET); and semiconductor controlled rectifier (SCR-thyristor). Given the immense and growing acceptance of SPICE, this revision should appeal to the audience of engineers, technicians, and students who use this design program.

### **From reader reviews:**

#### **Joseph Navarro:**

This book entitled Semiconductor Device Modelling with SPICE to be one of several books in which best seller in this year, this is because when you read this reserve you can get a lot of benefit upon it. You will easily to buy that book in the book retail outlet or you can order it by means of online. The publisher in this book sells the e-book too. It makes you more easily to read this book, since you can read this book in your Smart phone. So there is no reason for you to past this guide from your list.

#### **Elvira Eberhardt:**

People live in this new moment of lifestyle always try to and must have the time or they will get lot of stress from both way of life and work. So , whenever we ask do people have free time, we will say absolutely without a doubt. People is human not just a robot. Then we consult again, what kind of activity have you got when the spare time coming to anyone of course your answer can unlimited right. Then ever try this one, reading publications. It can be your alternative with spending your spare time, the book you have read is actually Semiconductor Device Modelling with SPICE.

#### **Bridgett Killion:**

Reading a book to get new life style in this 12 months; every people loves to examine a book. When you learn a book you can get a lots of benefit. When you read textbooks, you can improve your knowledge, because book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. If you would like get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, this sort of us novel, comics, and also soon. The Semiconductor Device Modelling with SPICE will give you new experience in looking at a book.

#### **Michael Clements:**

Within this era which is the greater individual or who has ability in doing something more are more special than other. Do you want to become certainly one of it? It is just simple solution to have that. What you must do is just spending your time almost no but quite enough to experience a look at some books. One of many books in the top listing in your reading list will be Semiconductor Device Modelling with SPICE. This book that is certainly qualified as The Hungry Hills can get you closer in turning out to be precious person. By looking way up and review this book you can get many advantages.
