Hazard Identification Methods - IChemE

Frank Crawley, Brian Tyler

Hazard Identification Methods - IChemE Frank Crawley, Brian Tyler

Hazard identification is fundamental to the safe design and operation of any system, be it a process plant or any other facility. The tools used vary according to the situation but they are all rigorous, systematic and depend to a greater or lesser extent on the knowledge of team members. This book provides a selection guide that introduces, describes and illustrates the most commonly used techniques. The selection is based on an analysis of the more common techniques used by European Process Safety Centre members.

IChemE, the Institution of Chemical Engineers, is the center for chemical, biochemical and process engineering professionals worldwide.

We are the heart of the process community, promoting competence and a commitment to sustainable development, advancing the discipline for the benefit of society and supporting the professional development of members.

Some of the areas we publish in include:

- Safety in the process industries - the BP Process Safety series
- Consultancy for chemical engineers
- Project management in the process industries
- Contract management in the process industries - International Forms Of Contract series
- Communication skills for engineers
